Provide a healthier start to life for children of low-income families

Provide a better education and job training for high school students

Provide a safe environment for all community members

The Colorado Trust partners with individuals and organizations across the state to strengthen the health and well-being of the people of Colorado.
Providing a healthy start in the first years of life.

This condition works to build health at birth, health and the early care they receive have lifelong implications. The conditions under which infants are born, their health and the early care they receive have lifelong implications. The conditions under which infants are born, their health and the early care they receive have lifelong implications. The conditions under which infants are born, their health and the early care they receive have lifelong implications.

The Trust-supported Health Connections program helps pregnant women and their infants in 75% of Colorado’s 64 counties to receive the prenatal care, nutrition and health education they need to ensure a healthy pregnancy. Issues affecting early periods of life, such as homelessness, substance abuse and mental health, are key to improving children’s health outcomes.

This program is up and running in 80% of Colorado’s 64 counties, helping providers in 46 Colorado counties, helped providers to increase the quality and quantity of after-school programs.

Making Colorado a place where all people can thrive.

We believe that this work is important to all of Colorado’s communities because of the unique cultural backgrounds as they provide care providers gain the skills necessary to consider the needs of low-income families. The Trust-supported health professions programs that offer educational opportunities are open to all students, and particularly serve students from low-income families.

As the Trust seeks to help health and the early care they receive have lifelong implications. The conditions under which infants are born, their health and the early care they receive have lifelong implications. The conditions under which infants are born, their health and the early care they receive have lifelong implications.
Keeping our kids safe, healthy and ready to learn.

Providing a healthy start in the first years of life.

This condition, which is called birth defects, has been shown to have effects on their development. The funding supports young children and their families in communities through a variety of initiatives. Through these programs, ces units or programs: in the first years of life, most inborn disorders can be treated or prevented. As part of our ongoing, we continued our funding of the Nurse-Family Partnership during pregnancy, learn effective early parenting skills, complete school and find employment.

For the eighth year we also continued our funding of the Nurse-Family Partnership, a program that seeks to help health non-profits, a non-profit that focuses on improving health outcomes for children. The program, nurses visit low- income, first-time mothers in the program, ensuring that they receive the care they need throughout pregnancy. Issues affecting early parenting skills, complete school and find employment.

School shootings and other violence have raised awareness about the importance of providing early intervention to at-risk students. Through this program, education and community building programs are now helping to address the bullying and post-traumatic stress that comes from bullying and other forms of peer violence. These programs are offering students a safe space where they can learn to be more assertive, how to deal with conflict, how to feel good about themselves and how to be more responsible.

The Story of The Colorado Trust’s Nurse-Family Partnership

A new report was released in 2006: Invest in Results – the story of the Nurse-Family Partnership (NFP). The NFP is a home visitation program that provides support to low-income, first-time mothers in the first year of their child’s life, helping them to build stronger bonds with their infant and provide a healthy start for their child. The program is designed to help families improve their own health and well-being, thereby reducing the risks of poverty, illness and violence for their children. The program is led by The Colorado Trust and partners with the state of Colorado and local community organizations to improve the health and well-being of low-income families.

The program is designed to help families improve their own health and well-being, thereby reducing the risks of poverty, illness and violence for their children. The program is led by The Colorado Trust and partners with the state of Colorado and local community organizations to improve the health and well-being of low-income families.

Making Colorado a place where all people can thrive.

In 2006, The Colorado Trust also supported the development of the Healthy Care Connect program, which links uninsured people with health care providers. The program is designed to help people access care and improve their health outcomes. The program is funded by The Colorado Trust and partners with multiple organizations to increase access to care.

Ensuring quality health care.

The program is designed to help people access care and improve their health outcomes. The program is funded by The Colorado Trust and partners with multiple organizations to increase access to care.

Through this effort, infants and toddlers benefit from increased health care access, improved health outcomes, and greater social connectedness. Additionally, the program is designed to help people access care and improve their health outcomes.

The Colorado Clinical Initiative

The program is designed to help people access care and improve their health outcomes. The program is funded by The Colorado Trust and partners with multiple organizations to increase access to care.
A new report was released in 2006: Invest in Results: The Story of The Colorado Trust's Nurse-Family Partnership. This program is up and running in 80% of Colorado's 64 counties, serving nearly 7,000 women to date. The program is designed to improve the health of mothers and children by providing education and support to new mothers. The program’s goal is to help mothers improve their own health and parenting skills, complete school and find employment. The program has been shown to improve maternal health and reduce rates of infant mortality.

The conditions under which infants are born, their health and the early care they receive have lifelong implications. While we all know that healthy babies are more likely to become healthy adults, the evidence is clear—supporting both the mother and the child reinforces healthy behaviors and can help break the cycle of poverty. The program works to improve the lives of families by helping them set their children on a path to success.

We also provide assistance that gives young people the skills, support and resources they need to avoid the life-altering consequences of bullying. Through ourbullying prevention initiatives, we have reached more than a million students, teachers and parents. The Bullying Prevention Initiative is a national effort to help schools, parents and communities provide a safe environment for all students. Through this initiative, we have helped schools develop policies and procedures to prevent bullying and help students who are bullied.

We continue to work with communities interested in transforming schools. Through this program, communities can work to improve schools. The program focuses on improving education for all students, but particularly those who are at risk of dropping out. The program helps schools develop a comprehensive plan for improving student achievement and reducing dropout rates. The program has helped schools improve student achievement, reduce dropout rates and increase graduation rates.

The Trust-organized Colorado campaign was designed to improve access to health care for all Coloradans. The campaign was successful in increasing the number of Coloradans who have health insurance. It also helped to increase the number of health care providers who accept Medicaid and Medicare.

The Trust continued its long-time support of The Colorado Demography Office, which estimates that the state's population is over 4.5 million people. The study notes that there are about 114,000 uninsured children in Colorado, which represents more than one in five children. The study also notes that 14 million children are covered by Medicaid, which represents 70% of the state's children.

Additionally, The Colorado Trust joined in support of the Rocky Mountain Healthy Aging Initiative. This initiative is designed to improve the health and well-being of older adults. The initiative has helped to increase the number of community-based programs that provide services to older adults. The program has helped to increase the number of older adults who participate in community-based programs and increase awareness about the importance of healthy aging.

The Trust-sponsored Colorado campaign was successful in increasing the number of Coloradans who have health insurance. It also helped to increase the number of health care providers who accept Medicaid and Medicare. The campaign also helped to improve access to health care for those who are uninsured.

The Trust-organized Colorado campaign was designed to improve access to health care for all Coloradans. The campaign was successful in increasing the number of Coloradans who have health insurance. It also helped to increase the number of health care providers who accept Medicaid and Medicare.
Providing a healthy start in the first years of life.

This condition works to reduce birth defects, their incidence and severity. Many women have never been told of these options. In support of this, the Trust also provided a three-year funding for a comprehensive program that focuses on ensuring that every newborn gets a healthy start.

Through this program, women receive counseling, home visits and one-on-one guidance on how to get infants as they grow. The program is up and running in 80% of Colorado’s counties, serving nearly 7,000 women to date. This program is being provided by The Colorado Trust, which has provided child care referrals since 1985.

The Story of The Colorado Trust's Nurse-Family Partnership

For the eighth year we also continued our funding for the Nurse-Family Partnership, which is a non-profit organization that provides child care referrals. The Nurse-Family Partnership is a key program. Through this program, women receive counseling, home visits and one-on-one guidance on how to get infants as they grow. The program is up and running in 80% of Colorado’s counties, serving nearly 7,000 women to date. This program is being provided by The Colorado Trust, which has provided child care referrals since 1985.

where all people thrive.

"They called it 'the Murder Capital of Colorado,'" said Rod. "They were there in an instant, and that was in the catheter lab and the team deployed a stent result of the hospital's participation in the Colorado Response Team, which had been put in place as a knee, but they were still engaged as they grow.

2006 Review

This report provides a brief overview of The Colorado Trust's work in 2006. Detailed information, including a full listing of grantees, stories of change and improvement, how The Trust makes grants and in-depth financial reporting is contained in The Colorado Trust's 2006 Annual Report, available online at www.coloradotrust.org.

Making Colorado a place
where all people thrive.
